
BIOFOTONICA ALLA NANO E MICRO-SCALA

MAURIZIO MATTARELLI, MARTINA ALUNNI CARDINALI, DANIELE FIORETTO (UNIPG)

SILVIA CAPONI (CNR)

A BROAD SCENARIO

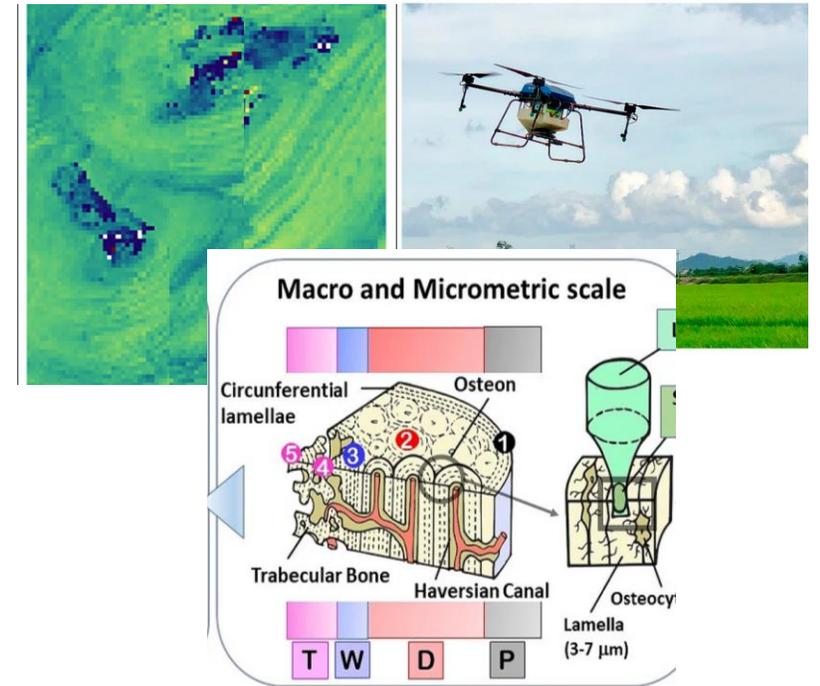

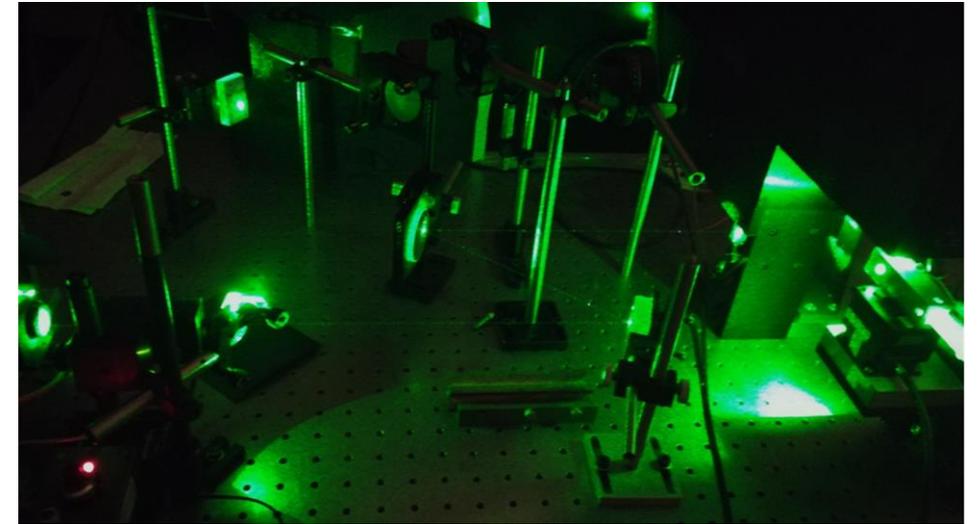

Physics touches many different aspects of this field:

from the optics of the instrument design, to the interaction mechanism of light and matter, to biophysics (fundamental and diagnostics), to the design and characterization of biomimetic materials

BIOPHOTONICS

- Disegno e realizzazione di **strumenti per la spettroscopia ottica e per l'imaging spettroscopico**.
- Studio, anche a scopo diagnostico, delle **proprietà meccaniche e molecolari in cellule e tessuti** quali colture microbiche, tessuti ossei, placche di Alzheimer, tessuti epiteliali sani e tumorali.
- Spettroscopia e Imaging per **l'Agricoltura di precisione**
- Proprietà elastiche di sistemi nanostrutturati per applicazioni di interesse biologico – **Bio materiali**

E IN ATENEO

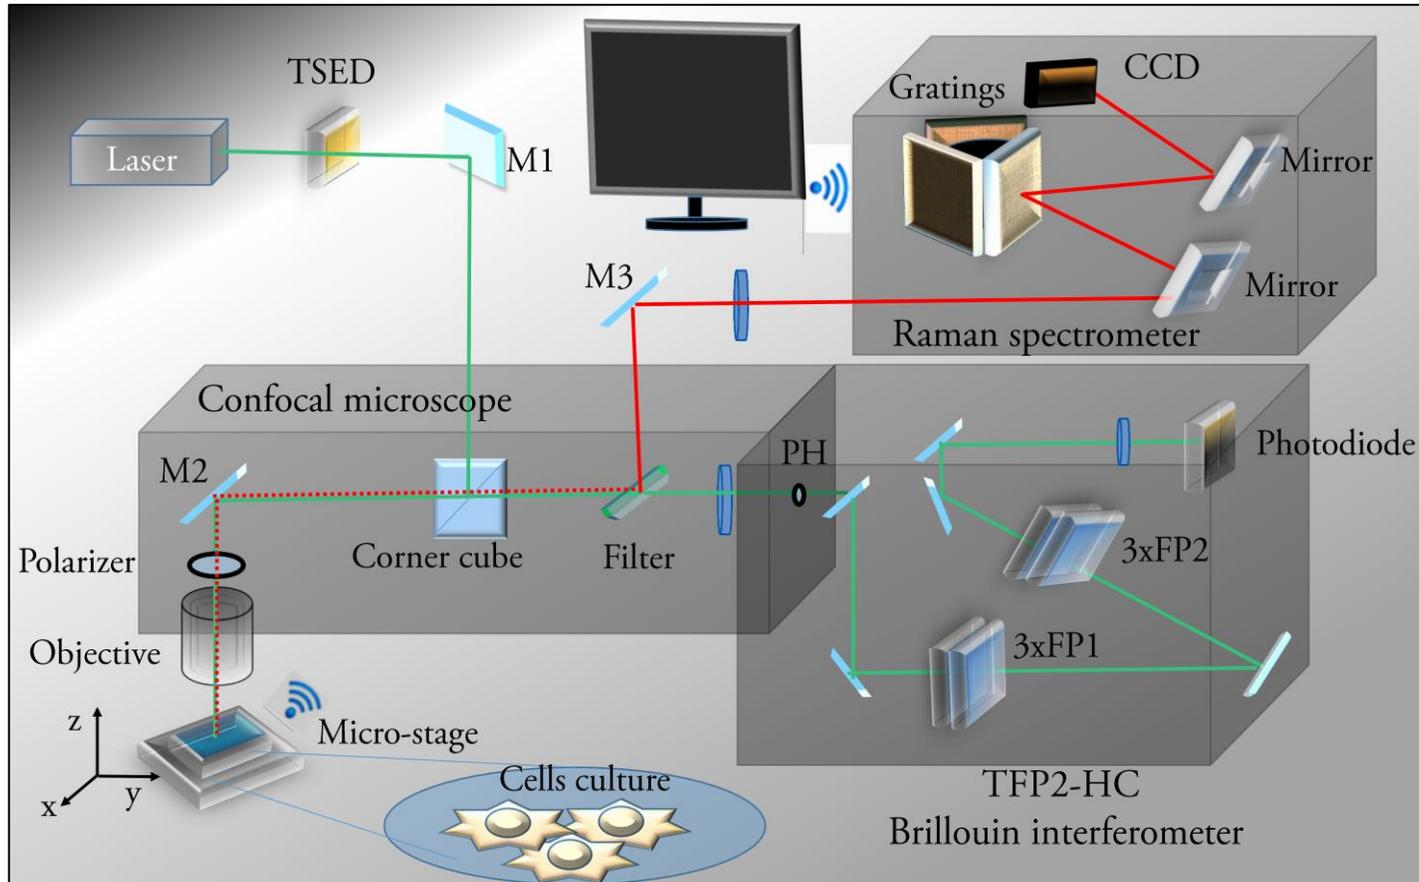

C-labs:

- 1) **Imaging & Spettrometria**
- 2) Computing & Data Management
- 3) Meccatronica

Didattica:

- 1) Tecnologie di Imaging (Biotecn.)
- 2) Caratterizzazione Chimica e fisica dei materiali (Ing. Industr.)
- 3) Laboratorio di ottica geom./avanzata (Ottica - Optometria.)
- 4) Metodologie spettroscopiche e di imaging per la caratterizzazione dei materiali (Ottica.-Optometria)

MICRO IMAGING OF BONE TISSUES

L'osso ha un'architettura sofisticata caratterizzata da un'organizzazione gerarchica, a partire dal livello sub-micrometrico. L'imaging iperspettrale Raman e Brillouin, accompagnato dal SEM, è molto adatto ad evidenziare le proprietà chimico meccaniche su diverse scale. Il risultato è una migliore comprensione del rapporto tra struttura e funzionalità, utile sia per studiare l'insorgenza di patologie che per sviluppare biomateriali compatibili.

AGRICOLTURA DI PRECISIONE

Imaging di riflettanza.

- Comparazione risultati per piante officinali ed infestanti (o sane/malate)
- Individuazione tramite machine learning delle regioni spettrali in cui le piante officinali e infestanti (sane/malate) sono maggiormente distinguibili.
- Sviluppo di strumentazione per l'acquisizione delle immagini
- Determinazione di un protocollo di riconoscimento tramite fotogrammetria (drone aereo o terrestre).

BIOMECHANICS AT SUBCELLULAR SPATIAL RESOLUTION ON TISSUES

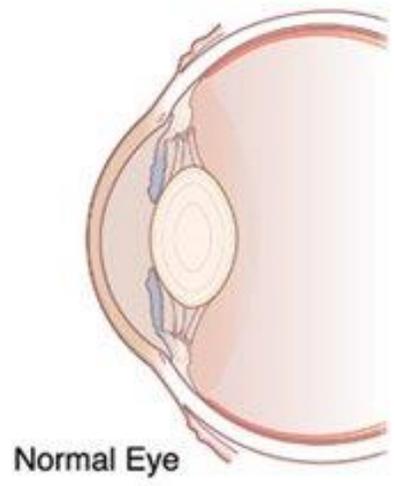

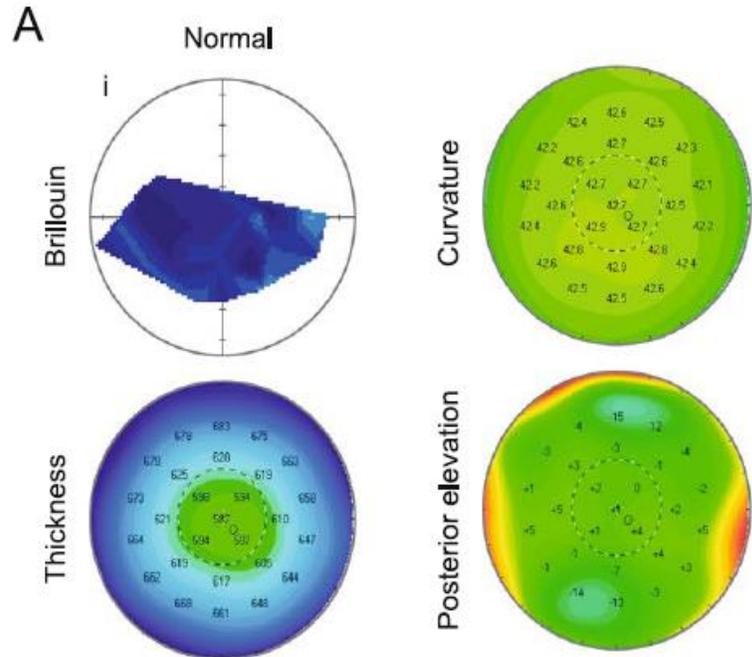

Human cornea

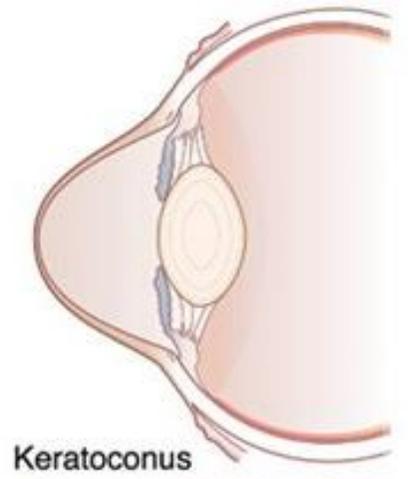

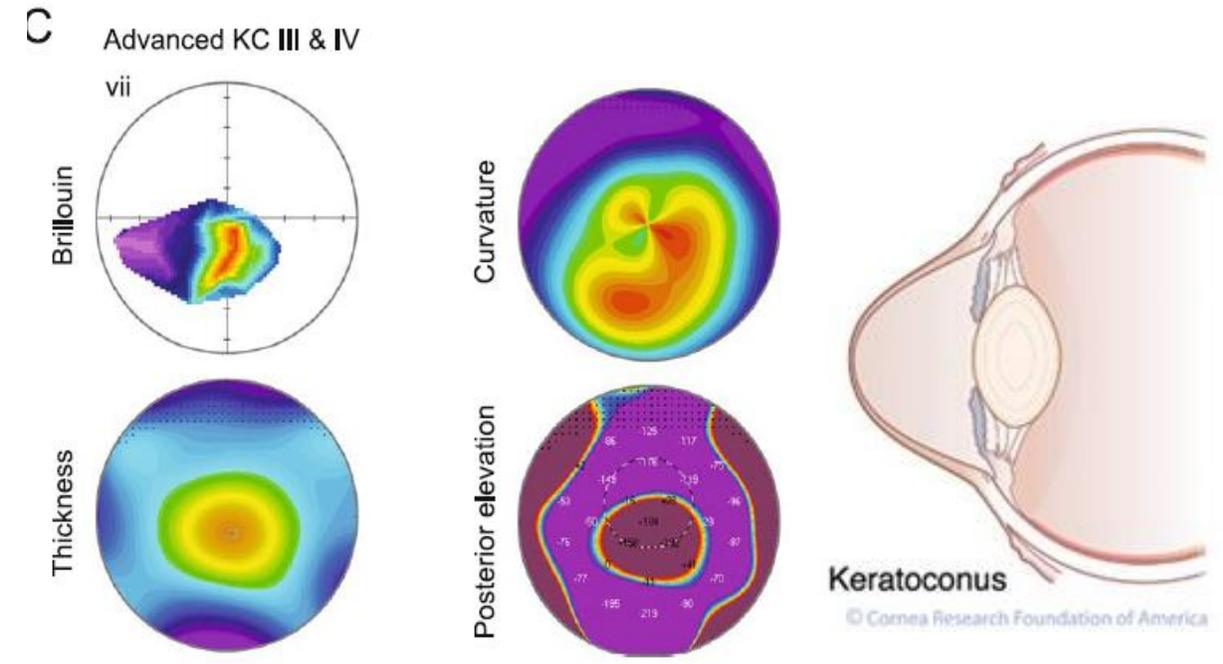

The first in vivo Brillouin imaging effort was reported by a team at Harvard Medical School, aiming at evaluating biomechanical properties of cornea and crystalline lens in animal models, and then in human in 2012.

JAMA Ophthalmology April 2015 Volume 133, Number 4

healthy cornea

Biomechanics at subcellular spatial resolution on tissues

Human cornea

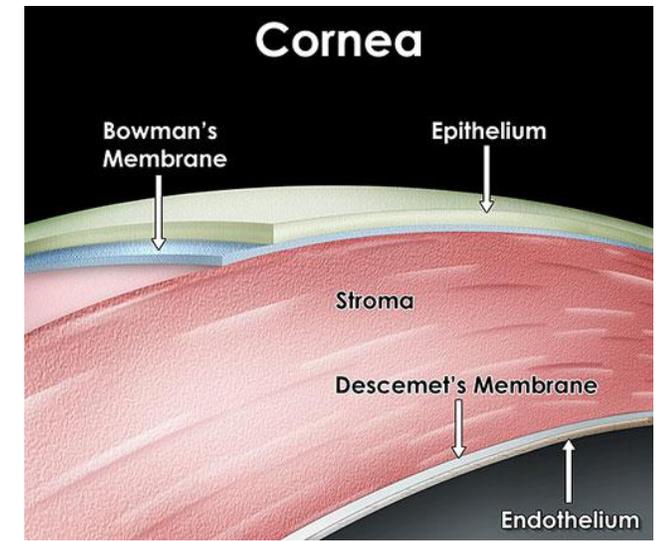

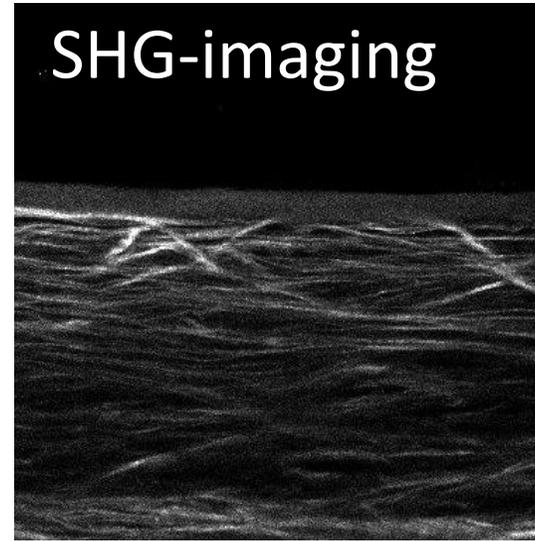

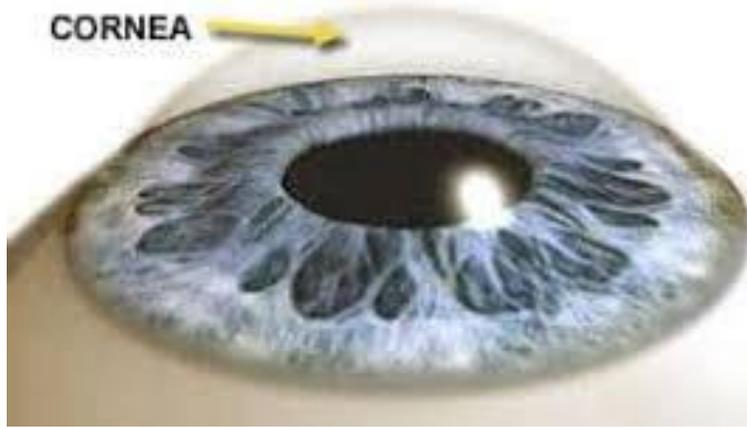

The **sutural lamellae**, immediately below Bowman's

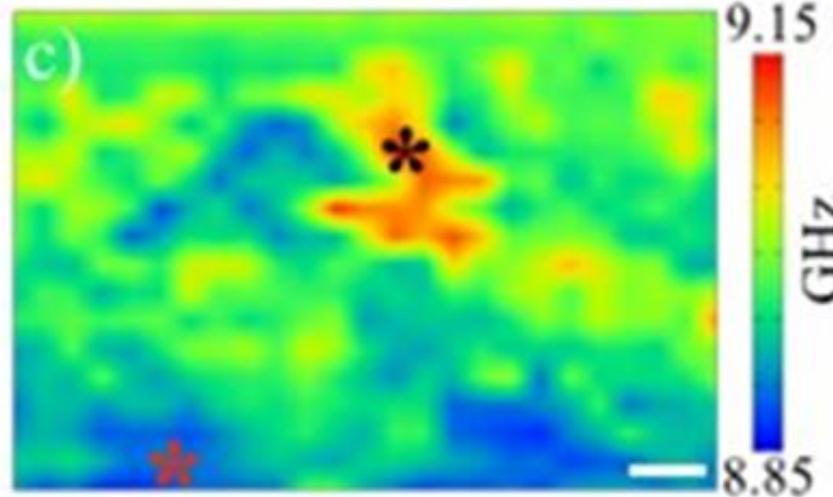

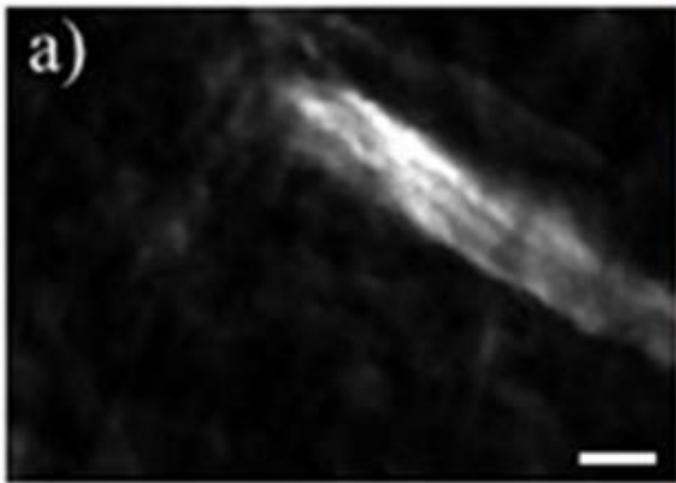

The use of a correlative approach was the key to achieve a deeper morphological interpretation of the mechanical properties, otherwise inaccessible to ordinary methods based on a single mechanism of optical contrast.
